Fax +49 (0)4 31 - 71 98 80 11

info@liebl-ip.de • www.liebl-ip.de

The company Liebl industry partners is specialized in reselling of industrial equipment articles coming from almost any industrial sector.

We are therefore interested in purchasing such goods in smaller and larger quantities. These can be brand new articles but also second-hand ones. These industrial goods are eventually exported to newly industrialized countries. The rules and norms of those countries, as well as their economic point of view allow the reutilization of these industrial goods.

The list below shows articles we are always looking for: pneumatic and hydraulic parts, electric motors, geared motors, drives, ball-bearings, whole electric control cabinets, automatic control engineering parts as well as equipment for electric energy supplies.

We are also interested in buying whole storages of spare parts that were intended for industrial machines which aren't used anymore or machines which are left over because of over-production. According to our experience these technical articles are often sold as scrap for a small amount of money or one might even have to pay a fee to get rid of these articles. Instead we offer you the acquisition of those articles for a very appealing price.

The clearing of the goods will be made in agreement with your conception. To date we have been working successfully with the automobile industry, the electric industry and many manufacturing companies.

We are interested in building a long-term business relationship. If required, we are glad to apply locally.

### SUMMARY OF OUR SPECTRUM

We purchase brand new and second-hand industrial equipment, for instance: motors, ball-bearings, pumps, pneumatic and hydraulic parts, electric control cabinets, automatic control engineering etc.

We resell spare parts for branded industrial machines and we also do worldwide distribution of left-over articles coming from warehouse clearances or over-production.
